Admonition

This document is exempt from open records, discovery or admission under Alabama Law and 23 U.S.C. §§ 148(h)(4) and 409). The collection of safety data is encouraged to actively address safety issues on regional, local, and site specific levels. Congress has laws, 23 U.S.C. § 148(h)(4) and 23 U.S.C. § 409 which prohibit the production under open records and the discovery or admission of crash and safety data from being admitted into evidence in a Federal or state court proceeding. This document contains text, charts, tables, graphs, lists, and diagrams for the purpose of identifying and evaluating safety enhancements in this region. These materials are protected under 23 U.S.C. §409 and 23 U.S.C. § 148(h)(4). In addition, the Supreme Court in *Ex parte Alabama Dept. of Trans.*, 757 So. 2d 371 (Ala. 1999) found that these are sensitive materials exempt from the Alabama Open Records Act.

Executive Summary

Study Initiation and Study Area

This study was initiated by St. Clair County and the City of Moody through the Advanced Planning, Programming, and Logical Engineering (APPLE) program developed by the Regional Planning Commission of Greater Birmingham (RPCGB). The study area includes the I-20 interchange with Kelly Creek Road, extending along Kelly Creek Road from US-78 (SR-4) to Park Avenue (CR-10).

Purpose of the Study

This study was undertaken to evaluate the feasibility of improving the Interstate 20 (I-20) interchange with Kelly Creek Road. The purpose of the study was to identify potential improvement alternatives and to analyze improvements to traffic operations, identify right-of-way acquisition needs, and develop construction cost estimates for each alternative.

If improvements to the interchange are deemed necessary, this report may serve as the first step toward a potential Interchange Modification Report (IMR).

This report summarizes the following tasks from the study:

- An evaluation of existing traffic conditions
- Future traffic forecasting and analysis of future conditions (20-year horizon)
- Development of conceptual alternatives for improving the interchange
- Opinions of probable cost and potential funding sources

Stakeholder Input

Prior to initiation of the APPLE study, several meetings were held to discuss a potential project at the Kelly Creek Road interchange. Attendees at meetings prior to the study included ALDOT, St. Clair County, City of Moody, and Sain Associates. The most recent meeting prior to the initiation of this study was held on December 5, 2022. ALDOT Director John Cooper was in attendance alongside ALDOT East Central Region staff. The consensus from ALDOT at this time was that further study of traffic operations at the interchange was needed to advance a project.

A project kickoff meeting for the study was held on September 13, 2023, at Moody City Hall. The meeting was attended by representatives of the City of Moody, St. Clair County, RPCGB, and Sain Associates. Stakeholders discussed the project background, identified priorities, and outlined expectations for the scope of the study. Short-term strategies to mitigate queuing on the interstate ramps were discussed, as well as the long-term goal of progressing towards a potential IMR.

Due diligence for a potential IMR was coordinated with ALDOT East Central Region staff and ALDOT Traffic Design Bureau staff. Determination of whether or not an IMR is required would be determined by the Alabama Division of Federal Highway Administration (FHWA).

Improvement Alternatives

In addition to the No Build Alternative, which assumes no improvements to the study area, the following two improvement scenarios were identified and analyzed:

- Alternative A – Improved Diamond Interchange with Bridge Replacement
- Alternative B – Diverging Diamond Interchange (DDI)

Higher resolution concept drawings of both alternatives are provided in [Appendix A](#).

The following evaluation matrix shows the anticipated benefits and challenges of each alternative. This table can also be found in Section 2.8 of this report.

Interchange Improvement Alternatives Evaluation Matrix

Category	No Build Alternative	Alternative A - Improved Diamond	Alternative B - DDI
Addresses Existing Capacity Deficiencies of the Two-Lane Bridge	No	Yes – Adds exclusive left turn lanes at ramp terminals	Yes – Reduces delay by allowing turning movements to flow freely
Mitigates Queueing on the I-20 Exit Ramps	No	Yes – Signalized intersections able to process queues more efficiently	Yes – Signalized intersections able to process queues more efficiently
Expands Capacity of the Interchange	No	Yes – Increases from 2 lanes to 4 lanes	Yes – Increases from 2 lanes to 4 lanes
Future LOS at I-20 Eastbound Ramps Intersection	AM Peak: LOS F PM Peak: LOS F	AM Peak: LOS B PM Peak: LOS C	AM Peak: LOS B PM Peak: LOS A
Future LOS at I-20 Westbound Ramps Intersection	AM Peak: LOS F PM Peak: LOS F	AM Peak: LOS D PM Peak: LOS C	AM Peak: LOS B PM Peak: LOS D
Opinion of Probable Cost	Maintenance costs only	\$19.2 million	\$13.8 million
Right-of-Way Acquisition & Utility Relocation Required	No	Yes, both required	Yes, both required
Method of Addressing Bridge Structure	No change	Full replacement; construct new bridge in 2 phases	Construct additional structure to the west of existing bridge; retain existing bridge
Interchange Alignment Matches Local Driver Expectation	Yes	Yes	No

FHWA's Capacity Analysis for Planning of Junctions (CAP-X) Tool was utilized to explore interchange alternatives to be evaluated in addition to an improved diamond interchange. Two feasible interchange configurations scored well in the CAP-X Tool's Overall V/C Ratio metric: single point urban interchange (SPUI) and diverging diamond interchange (DDI). The expected cost of bridge structure with a SPUI configuration is much higher than an improved diamond interchange and DDI configurations. Therefore, a SPUI configuration was ruled out from further detailed study. One interchange configuration not directly included in the CAP-X Tool is the double roundabout configuration, which is a diamond interchange with roundabout at each ramp terminal. Available space and high heavy volumes are concerns with this alternative, but a double roundabout would also be expected to function well at this location from a traffic operations perspective.

Next Steps

The immediate next step following the study is for ALDOT to seek the opinion of the Alabama Division of FHWA regarding the proposed alternatives. FHWA will determine whether or not an IMR is required to implement either of the proposed alternatives. Once this is officially determined and any required IMR is complete, the next step would be to seek funding for an environmental document, design, and construction of the resulting improvements.

Several IIJA-initiated competitive grant programs could be pursued once an IMR is complete or determined not to be necessary. The next chance to apply for appropriate competitive grant programs is likely Spring 2024 when a Notice of Funding Opportunity (NOFO) is released for the Infra, Rural, and Mega competitive grant programs.

Both the City and County currently have ATRIP-II projects underway which have not been let for construction at the time of this report. Therefore, funding for the Fiscal Year 2024 would not be eligible if either project is not let for construction by the application deadline, and the next opportunity for that program would be in Fall 2024 for Fiscal Year 2025 ATRIP-II cycle.

It is possible that a combination of local and state funding (i.e., ATRIP-II) could be used to reach the 20% match for various federal funding sources. This, along with combining the project with another large project in the area, should be explored throughout the process of seeking funding for the project.

1 Existing Conditions

1.1 Description of the Study Area

The study area is in the City of Moody within St. Clair County. The study area includes Kelly Creek Road near its interchange with Interstate 20, from US-78 south of the interchange to Park Avenue north of the interchange. **Figure 1** illustrates the location of the study area.

The land uses adjacent to the study area are commercial and industrial. There are several truck stop and gas station facilities near the interchange. To the north of the interchange, there is a Vulcan Industries facility just north of the I-20 westbound ramps, which is accessed by Display Drive; a Red Diamond facility along Park Avenue west of its intersection with Kelly Creek Road; and an industrial park along Kelly Creek Road north of its intersection with Park Avenue. To the south of the interchange, Kelly Creek Road transitions into US-78 and provides access to Moody Commerce Park, another multi-facility industrial park.

Table 1 summarizes the functional classifications and roadway geometry in the study area. All the study intersections are two-way stop controlled except for Kelly Creek Road at the I-20 eastbound ramps, which is all-way stop controlled.

Table 1: Study Area Roadway Characteristics

Road Name	Speed Limit (MPH)	Functional Classification	Typical Section
Kelly Creek Road	30-35	Major Collector	2-lane north of I-20 EB ramps 3-lane south of I-20 EB ramps
Interstate 20	70	Interstate	6-lane divided
US-78	35-55	Minor Arterial	2-lane undivided
Park Avenue	40	Minor Arterial/ Local Road	2-lane undivided
Display Drive	None Posted	Private Drive	2-lane divided

Figure 2 shows a map identifying each access point near the interchange.

In addition to the turning movement counts (TMCs), 24-hour bi-directional tube counts were collected at several of the truck stop driveways within the study area.

1.2 Traffic Volumes

Sain Associates collected traffic count data through subconsultant Marr Traffic, Inc on Tuesday, May 23, 2023.

24-hour turning movement count data was collected at the following intersections:

- Kelly Creek Road @ I-20 Eastbound Ramps
- Kelly Creek Road @ I-20 Westbound Ramps

14-hour turning movement count data was collected from 6:00 AM to 8:00 PM at the following intersections:

- Kelly Creek Road @ US-78
- Kelly Creek Road @ Park Avenue
- Kelly Creek Road @ South Valero Access 2/Love's Car Access
- Kelly Creek Road @ Display Drive /North Valero Car Access 1

The peak hours of traffic flow at the interchange were determined to be 7:00 – 8:00 AM and 4:30 – 5:30 PM. **Figure 3** illustrates the existing traffic volumes from the collected turning movement counts during the peak hours.

Additionally, 24-hour bi-directional counts were collected at the following driveways within the study area:

- North Valero Truck Access
- North Valero Car Access 2
- South Valero Access 2
- Love's Truck Access 1
- Love's Truck Access 2

Classification of vehicle types was included in data collection efforts. Heavy vehicles percentages at the following locations are listed as follows:

- Kelly Creek Road, North of I-20:
 - 3.8% in AM peak hour
 - 4.0% in PM peak hour
- Kelly Creek Road, at I-20:
 - 9.0% in AM peak hour
 - 7.0% in PM peak hour
- Kelly Creek Road, South of I-20:
 - 15.1% in AM peak hour
 - 11.9% in PM peak hour

Entering and exiting volumes for each driveway in the study area are summarized in **Table 2**. All raw traffic data reports are provided in **Appendix B**.

Table 2: Bi-directional Counts Summary

Driveway	AM Peak Hour		PM Peak Hour	
	Entering	Exiting	Entering	Exiting
North Valero Truck Access	13	17	11	14
North Valero Car Access 1	52	90	33	81
North Valero Car Access 2	88	39	99	37
South Valero Access 1	1	19	1	33
South Valero Access 2	42	21	58	15
Love's Car Access	150	133	135	138
Love's Truck Access 1	37	1	42	1
Love's Truck Access 2	3	50	13	33

1.3 Field Review

Sain Associates performed field reviews on Wednesday, August 16, 2023 from 3:00 to 6:00 PM and Thursday, August 17, 2023 from 7:00 to 8:00 AM. Observations were chiefly focused on the I-20 interchange ramps and the surrounding sections of Kelly Creek Road.

During the AM peak period, intermittent queuing occurred along Kelly Creek Road southbound from the I-20 westbound ramps to Park Avenue and Kelly Creek Road northbound from the I-20 eastbound ramps to Love's Truck Access 2.

During the PM peak period, sustained queuing occurred from 5:15 PM to 6:00 PM on the I-20 eastbound exit ramp and Kelly Creek Road northbound from the I-20 eastbound ramps to US-78. **Photos 1 and 2** show the I-20 eastbound exit ramp queue at Kelly Creek Road during the PM peak period. The queue reached the I-20 gore point several times between 5:15 PM and 6:00 PM.

Detailed notes containing observations and photos from the field review are included in **Appendix C**.

Photo 1: Queueing on I-20 eastbound exit ramp at Kelly Creek Road

Photo 2: I-20 eastbound exit ramp queueing to gore point of I-20

1.4 Utilities and Right-of-Way

There are various utilities in the study area, including water, sanitary sewer, gas, fiber, and overhead power. These utilities mainly serve the gas stations on the north and south sides of the interchange. Utility plan sheets from the recently completed improvements to Kelly Creek Road are provided in **Appendix D**.

Kelly Creek Road has a right-of-way width of 150' throughout the study area, as shown in **Figure 4**.

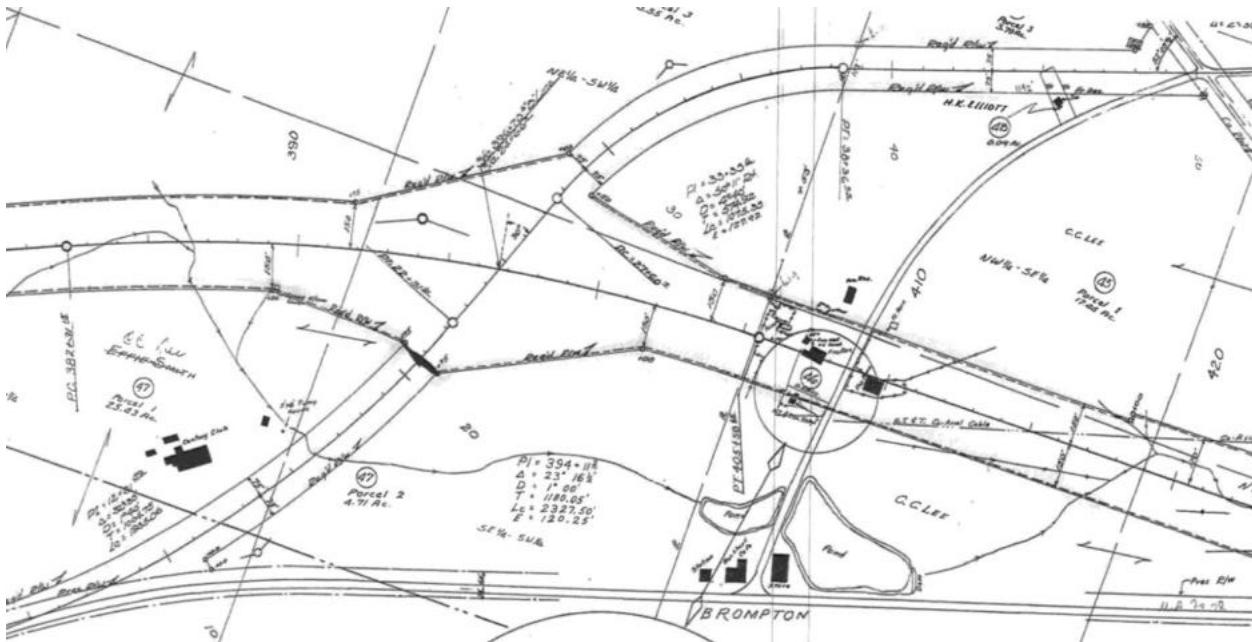

Figure 4: ALDOT Right-of-Way Map of Study Area

An existing force main crosses both sides of the interstate approximately 120' to the west of the gore point of the I-20 eastbound exit ramp, as shown in **Figure 5**. Any potential improvements to the interchange that involve lengthening the eastbound exit ramp or the westbound entrance ramp may require relocation of the force main.

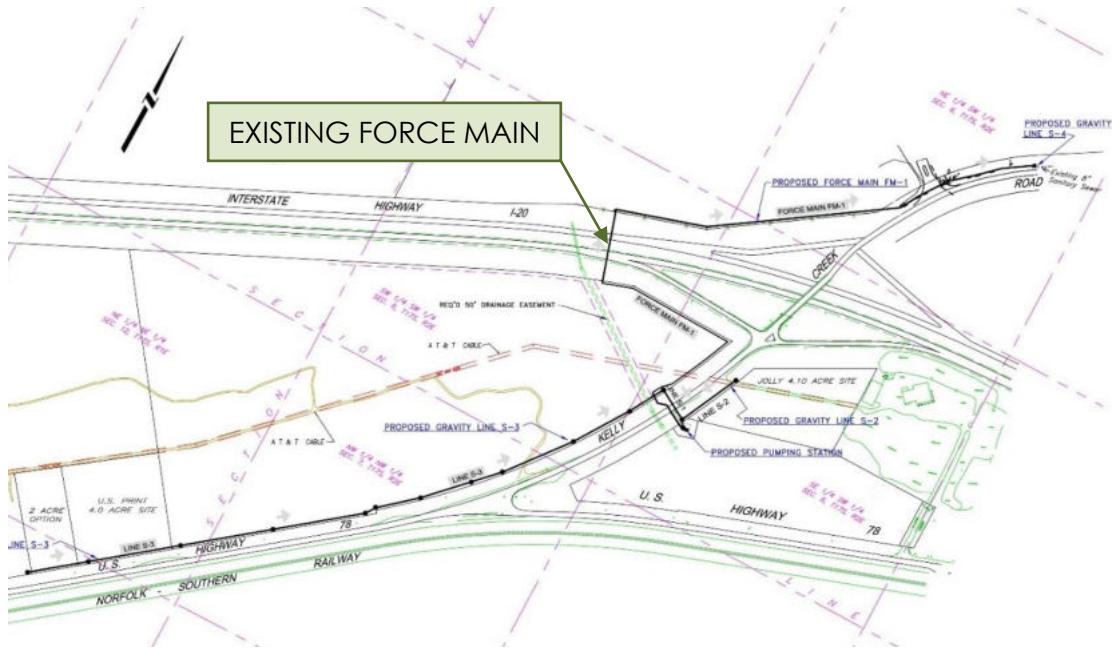

Figure 5: Utility Plans Showing Existing Force Main Across I-20

1.5 Crash Data Analysis

The information presented in this section is exempt from open records, discovery or admission under Alabama Law and 23 U.S.C. §§ 148(h)(4) and 409). The collection of safety data is encouraged to actively address safety issues on regional, local, and site-specific levels. Congress has laws, 23 U.S.C. § 148(h)(4) and 23 U.S.C. § 409 which prohibit the production under open records and the discovery or admission of crash and safety data from being admitted into evidence in a Federal or state court proceeding. This document contains text, charts, tables, graphs, lists, and diagrams for the purpose of identifying and evaluating safety enhancements in the project area. These materials are protected under 23 U.S.C. § 409 and 23 U.S.C. § 148(h)(4). In addition, the Supreme Court in *Ex parte Alabama Dept. of Trans.*, 757 So. 2d 371 (Ala. 1999) found that these are sensitive materials exempt from the Alabama Open Records Act.

Crashes are to some degree random events; therefore, crash frequencies naturally fluctuate over time at a given site. This randomness indicates that short-term crash frequencies alone are not a reliable estimator of long-term crash frequency. The crash fluctuation over time makes it difficult to determine whether changes in the observed crash frequency are due to changes in site conditions or are due to natural fluctuations. When a period with high crash frequency is observed, it is statistically probable that the following period will have low crash frequency. This tendency is known as regression-to-the-mean (RTM). Not accounting for the effects of RTM introduces the potential for "RTM bias" (Refer to the Highway Safety Manual for more information).

Crash data for this analysis was provided by the Regional Planning Commission of Greater Birmingham (RPCGB). Data included crash information from January 2018 to December

2022 from the Critical Analysis Reporting Environment (CARE) database maintained by the Center for Advanced Public Safety (CAPS) at The University of Alabama. The data is summarized as follows:

- One hundred seven (107) total crashes reported,
- Zero (0) fatal, incapacitating injury, or non-incapacitating injury crashes,
- Sixteen (16) possible injury crashes, and
- Eighty-nine (89) property damage only crashes.
- Two (2) crashes reported no crash severity.

Figures 6 and 7 illustrate the breakdown of the crash data by collision type and severity, respectively.

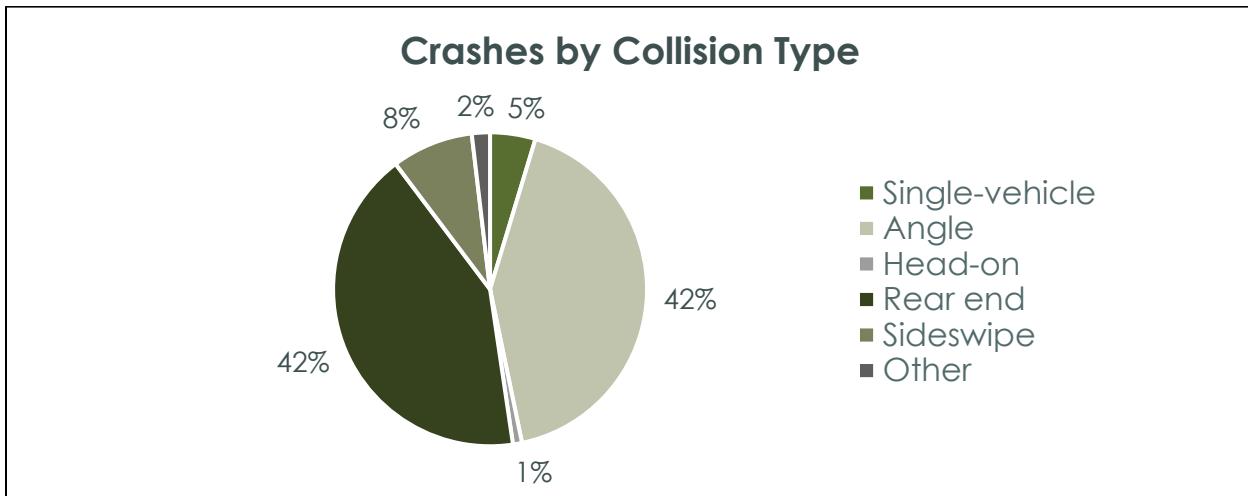

Figure 6: Crash Data Breakdown by Collision Type

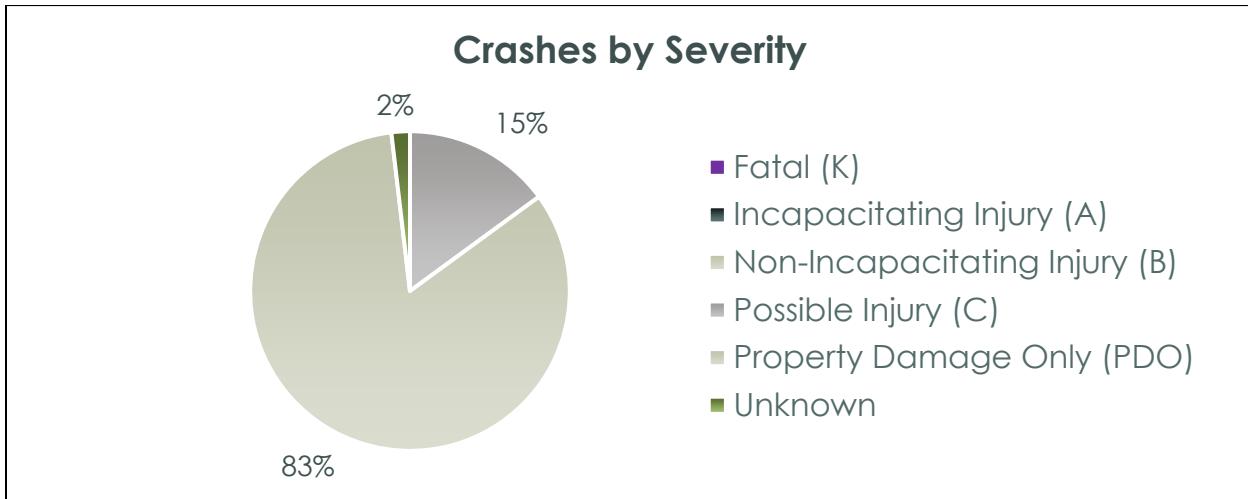

Figure 7: Crash Data Breakdown by Severity

Rear-end and angled collisions each represented the most crashes among the reported crashes in the dataset. Rear-end collisions are typically low-severity crashes, while angled collisions tend to have higher severities.

1.6 Existing Conditions Capacity Analysis

Using the methods described in the Highway Capacity Manual, published by the Transportation Research Board, Sain analyzed the existing traffic conditions within the study area. According to this method of analysis, traffic capacities are expressed as levels of service (LOS) ranging from "A" to "F." A detailed description of each LOS designation is included in **Appendix E**. Generally, LOS "C" or better is considered desirable, while LOS "D" is considered acceptable during peak hours of traffic flow. Trafficware's Synchro 11 modeling software was used to complete this analysis.

Full printouts of the existing conditions capacity analysis are provided in **Appendix F**, with the results summarized in **Table 3**.

Table 3: Existing Levels of Service

Intersection	Approach	Level of Service	
		AM Peak	PM Peak
Kelly Creek Road @ I-20 EB Ramps	EB	EB Exit Ramp	B C
	NB	Kelly Creek Rd	B C
	SB	Kelly Creek Rd	C C
Kelly Creek Road @ I-20 WB Ramps	WB	WB Exit Ramp	F D
	NB	Kelly Creek Rd	A A
	SB	Kelly Creek Rd	A A
Kelly Creek Road @ US-78	WB	US-78	B B
	NB	Kelly Creek Rd	A A
	SB	Kelly Creek Rd	A A
Kelly Creek Road @ Park Avenue	EB	Park Ave	C C
	WB	Park Ave	C C
	NB	Kelly Creek Rd	A A
	SB	Kelly Creek Rd	A A
Kelly Creek Road @ Love's Car Access/ South Valero Access 1	EB	Love's Car Access	C C
	WB	S Valero Access 1	B C
	NB	Kelly Creek Rd	A A
	SB	Kelly Creek Rd	A A
Kelly Creek Road @ Display Drive/North Valero Car Access 1	EB	Display Dr	C A
	WB	N Valero Car Access 1	E C
	NB	Kelly Creek Rd	A A
	SB	Kelly Creek Rd	A A

It is not uncommon for field conditions to differ from modeled conditions, which is the case for the I-20 westbound exit ramp and the I-20 eastbound exit ramp. Modeled conditions for the I-20 eastbound exit ramp appeared better than what was observed in the field, while modeled conditions for the I-20 westbound ramp appeared worse than what was observed in the field. The all-way stop controlled intersection at the I-20 eastbound ramps is not operating as efficiently as the model projects. At the I-20 westbound ramps intersection, queued motorists along Kelly Creek Road are stopping to allow vehicles to enter from the I-20 westbound ramp. This cannot be accurately represented in the Synchro model. Both instances of the modeled conditions failing to match the existing conditions should be considered in future conditions models.

According to the existing conditions capacity analysis, all study intersection approaches are currently operating with LOS D or better during both peak periods, except for the I-20 Westbound Exit Ramp at Kelly Creek Road during the AM peak period and the Westbound Display Drive at Kelly Creek Road during the AM peak period.

1.7 Existing Conditions Signal Warrant Evaluation

Sain Associates performed a traffic signal warrant evaluation for the intersections of Kelly Creek Road and the eastbound & westbound I-20 ramps according to the guidelines contained in the *Manual of Uniform Traffic Control Devices* (MUTCD), 2009 Edition. These guidelines establish nine different conditions that could warrant the installation of a traffic signal. The following warrants are most commonly used to justify a traffic signal:

- Warrant #1 – Eight-Hour Vehicular Volume
- Warrant #2 – Four-Hour Vehicular Volume

In evaluating Warrants #1 and #2, the existing traffic volumes were compared to the minimum thresholds required by the MUTCD to satisfy the need for a traffic signal. ALDOT's *Traffic Signal Design Guide & Timing Manual* (2015) provides guidelines for reducing projected right-turning volumes from the minor road to account for a certain percentage of vehicles being able to turn right without the installation of a traffic signal.

However, a sight distance issue looking north from the I-20 eastbound exit ramp prevents the right-turning vehicles from taking full advantage of the exclusive right turn lane. For this reason, it may not be appropriate to apply the right-turn reduction specified for the lane geometry. Without the right-turn reduction applied to traffic volumes, the signal warrant results are different.

Also, previous remedial measures were attempted in the form of converting from side-street stop control to all-way stop control to mitigate unsatisfactory intersection sight distance on the I-20 eastbound ramp approach to Kelly Creek Road. Based on field observations, this remedial measure does mitigate sight distance issues but fails to mitigate queueing onto the mainline interstate. Exclusive right turn lanes were also installed on both I-20 exit ramps at Kelly Creek Road as previous remedial measures.

The results of this analysis with the right-turn reduction applied are summarized in **Table 4**, while the results of this analysis without the right-turn reduction applied are summarized in **Table 5**. Full reports of the signal warrant evaluation are given in **Appendix G**.

Table 4: Existing Conditions Signal Warrant Evaluation Results – With Right-Turn Reduction

Intersection	Signal Warrant Result			
	#1 – Eight Hour Volume		#2 – Four Hour Volume	
	Hours Met	Satisfied?	Hours Met	Satisfied?
Kelly Creek Road @ I-20 Eastbound Ramps	4/8 hours	No	3/4 hours	No
Kelly Creek Road @ I-20 Westbound Ramps	0/8 hours	No	2/4 hours	No

Table 5: Existing Conditions Signal Warrant Evaluation Results – Without Right-Turn Reduction

Intersection	Signal Warrant Result			
	#1 – Eight Hour Volume		#2 – Four Hour Volume	
	Hours Met	Satisfied?	Hours Met	Satisfied?
Kelly Creek Road @ I-20 Eastbound Ramps	8/8 hours	Yes	4/4 hours	Yes
Kelly Creek Road @ I-20 Westbound Ramps	8/8 hours	Yes	4/4 hours	Yes

1.8 Bicycle and Pedestrian Accommodations

There are no pedestrian accommodations within the study area. By state law, cyclists may ride within the traveled way, but there are no exclusive bicycle facilities within the study area. No bicycle or pedestrian activity was observed during the field review.

1.9 Existing Documents and Adjacent Projects

Kelly Creek Road Phase 1 Improvements Memorandum

Sain Associates completed this technical memo on August 4, 2016 for St. Clair County. The purpose of the memo was to evaluate potential improvements to Kelly Creek Road.

The following recommendations were listed as a result of the analysis:

- Widening of the I-20 westbound off ramp to include a right turn lane with an increased right turn radius
- Widening of the I-20 eastbound off ramp to include a right turn lane with an increased right turn radius
- Widening of Kelly Creek Road to provide a northbound right turn lane plus an acceleration lane onto the I-20 eastbound on ramp

- Relocating the stop line for northbound Kelly Creek Road at the I-20 eastbound ramps closer to the intersection
- Closing the northern Love's right-in only driveway
- Closing the middle Valero driveway
- Widening Kelly Creek Road to three lanes from just south of I-20 to US-78
 - Raised median from I-20 through the northern Valero driveway
 - Southbound left turn lane for the southern Valero driveway
 - Two-way-left-turn-lane from the southern Valero driveway to US-78

Additionally, signal warrant analyses were conducted at the intersections of Kelly Creek Road and the eastbound & westbound I-20 ramps. Neither location was found to warrant the installation of a traffic signal, but it was recommended to periodically monitor the traffic conditions for a potential need for a traffic signal in the future.

Kelly Creek Road & I-20 Ramps Widening & Intersection Improvements

Sain Associates designed improvements for Kelly Creek Road that included all the listed recommendations from the previously described Kelly Creek Road Phase 1 Improvements Memorandum. Construction began in January 2022 and was completed in July 2023. **Photo 3** contains a view of Kelly Creek Road just south of I-20.

Photo 3: Kelly Creek Road improvements just south of I-20 eastbound ramps

Kelly Creek Commerce Park Traffic Impact Analysis

Sain Associates performed a traffic impact analysis (TIA) for a proposed industrial park located on the west side of Kelly Creek Road to the north of its intersection with Park Avenue. This TIA was submitted in March 2020 and construction of the industrial park has since been completed.

The study analyzed the intersections of Kelly Creek Road with I-20 eastbound ramps, I-20 westbound ramps, and Park Avenue. According to the future conditions capacity

Kelly Creek Road Interchange APPLE Study
Moody, St. Clair County, Alabama

analysis, the Park Avenue approaches at Kelly Creek Road were projected to operate with level of service (LOS) E or F; the report notes that it is not uncommon for side streets at stop-controlled intersections to experience low LOS during peak hours. The intersections of Kelly Creek Road and the I-20 ramps were projected to operate with LOS D or better.

No improvements to the existing study intersections were recommended by this TIA.

Speedway Traffic Impact Analysis (Not Constructed)

Sain Associates performed a TIA for a proposed Speedway truck stop located in the northeast quadrant of Kelly Creek Road and US-78. This TIA was submitted in April 2020. At the time this APPLE study was prepared, construction of the Speedway facility had not occurred.

The study analyzed the intersections of Kelly Creek Road with I-20 eastbound ramps, I-20 westbound ramps, and US-78. According to the future conditions capacity analysis, each study intersection approach was projected to operate with LOS D or better.

No improvements to the existing study intersections were recommended by this TIA.

Although this development has not yet been constructed, the estimated added trips were incorporated into the capacity analysis for this APPLE study to account for potential future developments in the area.

2 Concept Plan Development and Recommendations

2.1 Purpose and Need for Improvements

At the Kelly Creek Road interchange with I-20, the purpose and need for improvement is to address existing capacity deficiencies of the two-lane bridge over I-20, mitigate queueing on the I-20 exit ramps, address sight distance issue at the I-20 eastbound exit ramp approach to Kelly Creek Road, and expand the capacity of the interchange to accommodate additional development north of the interchange.

2.2 Future Traffic Volumes and Forecasting

A background growth rate was applied to existing traffic volumes to forecast a 20-year horizon (year 2043). Using historical annual average daily traffic (AADT) volumes from ALDOT's *Alabama Traffic Data* website, a 1% linear growth rate was determined to be appropriate. **Figure 8** illustrates the 2043 background traffic volumes.

Additionally, generated traffic volumes from the Kelly Creek Commerce Park and Speedway traffic impact analyses (see Section 1.9) were added to the background volumes to calculate the combined future traffic volumes. Although the Speedway development was not constructed, those volumes were used as a placeholder for any future development in that parcel. **Figure 9** illustrates the generated trips estimated by the two traffic impact analyses, and the combined future traffic volumes are shown in **Figure 10**.

The full traffic impact analysis report documents are available upon request.

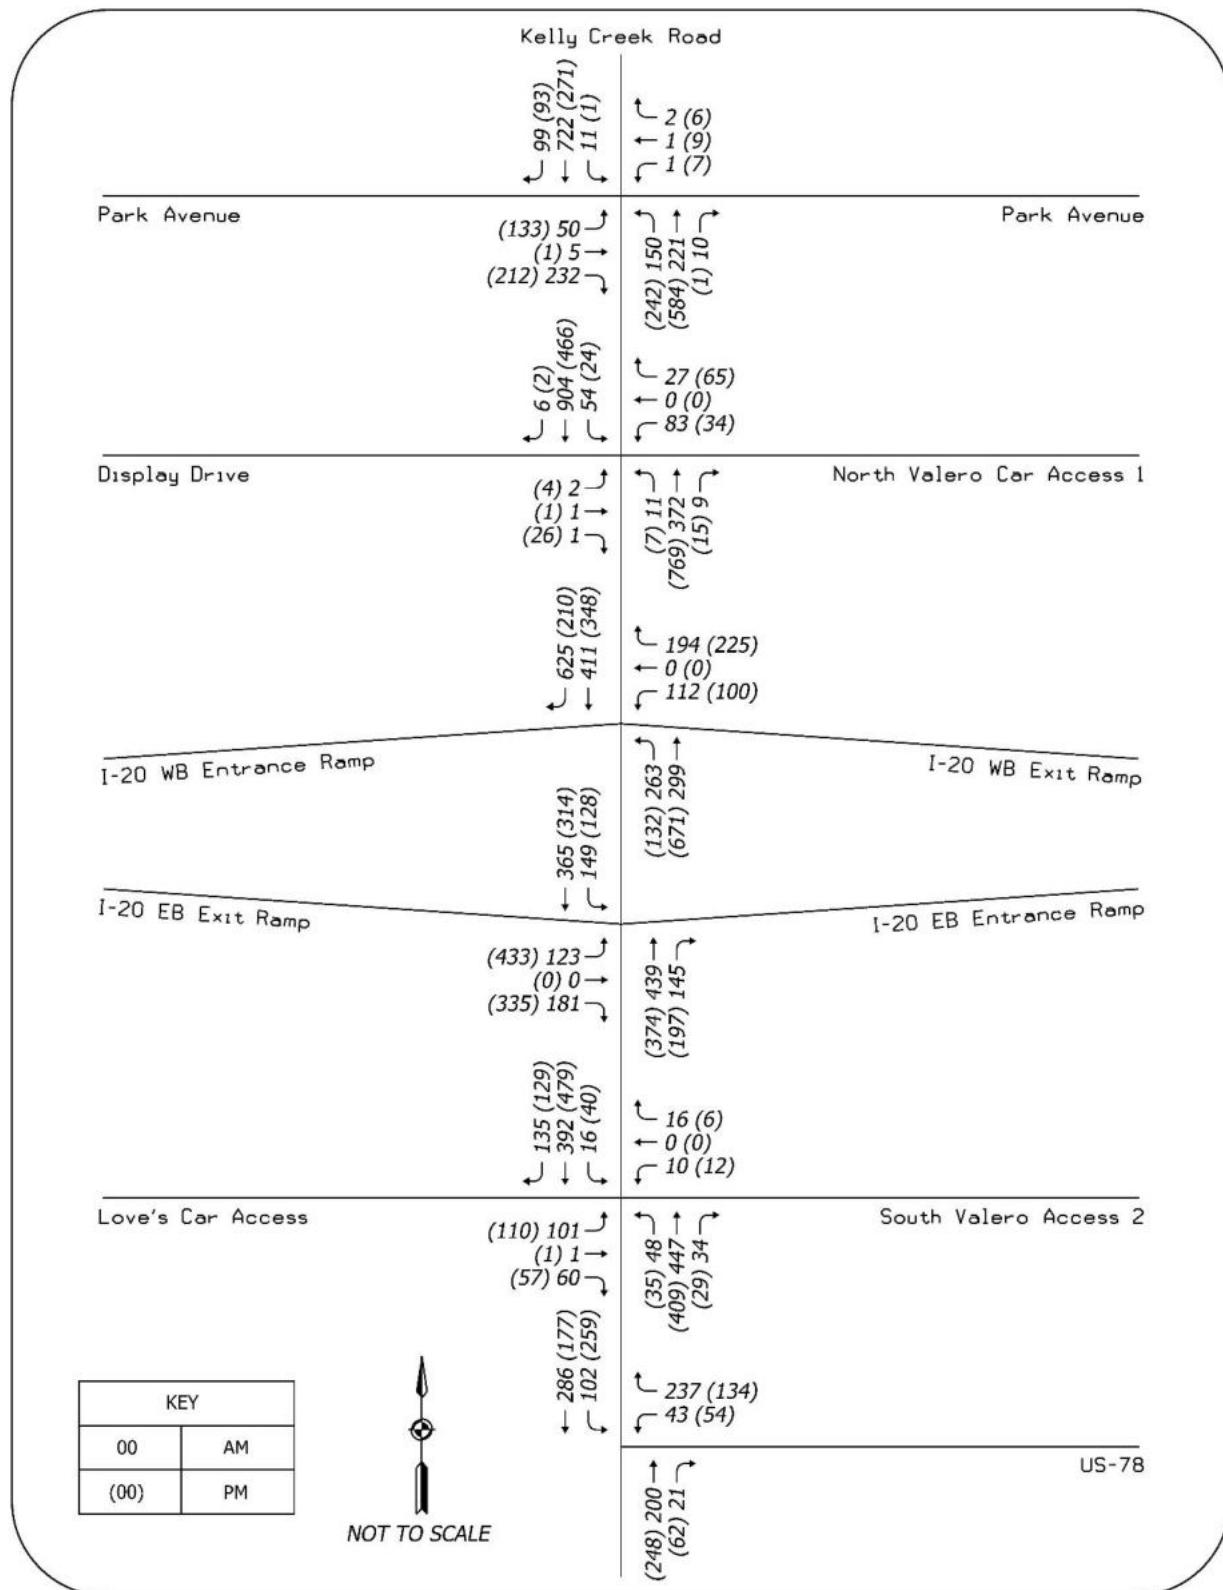

Figure 10: Combined Future Peak Hour Traffic Volumes (2043)

2.3 Interim Recommendations

Queueing on the I-20 eastbound exit ramp was observed reaching the gore point of the ramp and extended into the interstate mainline. This should be addressed independently from any larger-scale interchange improvements. Previously, the intersection's two-way stop control was updated to an all-way stop control configuration to address sight distance issues for eastbound drivers looking left (north) along Kelly Creek Road; however, it is clear from field observations that this configuration is not able to adequately process the traffic on the I-20 eastbound exit ramp during the PM peak hour. A traffic signal would allow queues on the ramp to clear more efficiently, while also serving the traffic on Kelly Creek Road.

A traffic signal warrant evaluation was conducted (see Section 1.7) and it was determined that the results of the signal warrant evaluation are dependent on application of right-turn reductions at both intersections. The application of the right-turn reductions, which are based on lane geometry, may not be appropriate in this case due to sight distance issues and queueing on the I-20 eastbound exit ramp.

With right-turn reductions applied, both intersections failed to satisfy either warrant that was considered. However, without right-turn reductions applied, both intersections did satisfy Warrant #1 and Warrant #2 for installation a traffic signal. Based on the analysis performed in the study, Sain Associates recommends the following items in the interim:

1. Install a temporary traffic signal at the intersection of Kelly Creek Road and I-20 Eastbound Ramps. Once a build alternative is constructed, consider removal of or modification of this traffic signal as needed.
2. Do not install a temporary traffic signal at the intersection of Kelly Creek Road and I-20 Westbound Ramps. Ability to coordinate the signals in the interim period could prove challenging and ultimately make traffic conditions worse.

The interim recommendations are not representative of a long-term solution to the issues at the Kelly Creek Road interchange. The goal of the interim recommendations are to mitigate existing queueing onto the I-20 eastbound mainline. The long-term solutions evaluated in this study are found in Section 2.4.

Photo 4 displays the all-way stop-control condition at the I-20 eastbound exit ramp approach to Kelly Creek Road.

Photo 4: All-Way Stop-Control Condition at I-20 Eastbound Exit Ramp Approach to Kelly Creek Road

2.4 Build Alternatives

In addition to the No Build Alternative, which assumes no improvement to the existing interchange, two improvement scenarios were evaluated for the interchange. Higher resolution concept drawings of both alternatives are provided in [Appendix A](#).

Alternative A – Improved Diamond Interchange with Bridge Replacement

The main improvement in this scenario is the widening of the bridge from two lanes to four lanes. The new geometry would feature a through lane and exclusive left turn lane on northbound and southbound Kelly Creek Road.

This scenario was analyzed with coordinated traffic signals at the two ramp terminals because the existing stop-controlled intersections resulted in failing LOS for both exit ramps during both peak periods. Traffic volumes should be monitored periodically to determine whether traffic signals are warranted. Additionally, this scenario was modeled with an exclusive southbound right turn lane from Kelly Creek Road onto the I-20 westbound entrance ramp.

[Figure 11](#) shows a conceptual layout of Alternative A.

Figure 11: Alternative A – Improved Diamond Interchange Concept

Alternative B – Diverging Diamond Interchange

A diverging diamond interchange (DDI) is an alternative design in which traffic crosses over – or diverges – from the right side of the road to the left, and then back to the right side again beyond the interchange. A DDI is typically appropriate for interchanges with relatively low through volumes and relatively high turning volumes, as the left turn movements can be made without crossing opposing traffic lanes. Because the DDI is not a common configuration in Alabama, it may take time for drivers to become acclimated to the DDI configuration.

Figure 12 shows a conceptual layout of Alternative B.

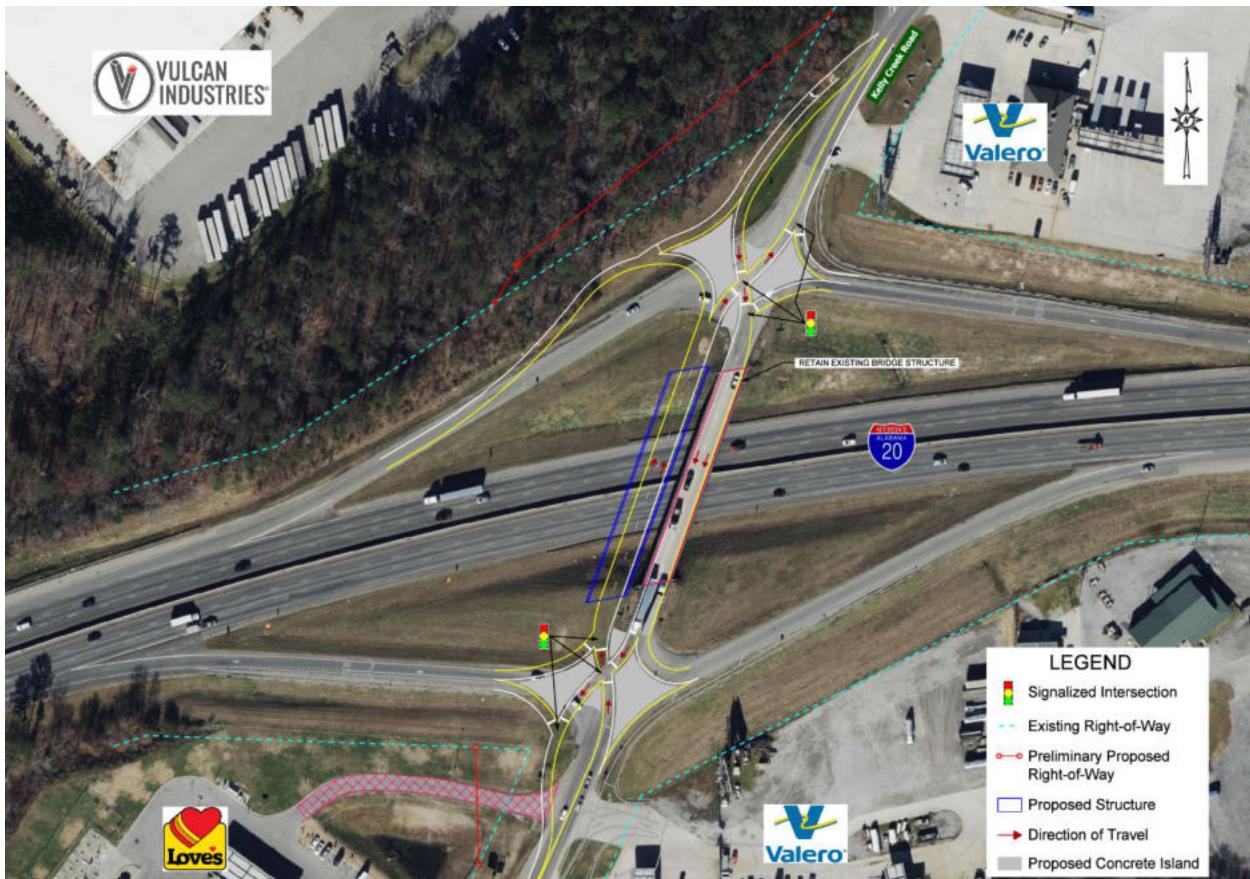

Figure 12: Alternative B – Diverging Diamond Interchange Concept

Additional Alternatives Considered

FHWA's Capacity Analysis for Planning of Junctions (CAP-X) Tool was utilized to explore interchange alternatives to be evaluated in addition to an improved diamond interchange. Two feasible interchange configurations scored well in the CAP-X Tool's Overall V/C Ratio metric: single point urban interchange (SPUI) and diverging diamond interchange (DDI). The expected cost of bridge structure with a SPUI configuration is much higher than an improved diamond interchange and DDI configurations. Therefore, a SPUI configuration was ruled out from further detailed study. One interchange configuration not directly included in the CAP-X Tool is the double roundabout

configuration, which is a diamond interchange with roundabout at each ramp terminal. Available space and high heavy volumes are concerns with this alternative, but a double roundabout would also be expected to function well at this location from a traffic operations perspective.

2.5 Future Conditions Capacity Analysis

Each alternative was analyzed under future conditions using the HCM methodology previously described for the existing conditions capacity analysis. **Table 6** summarizes the LOS results for the future No Build Alternative, which assumes no improvements to the existing interchange. **Table 7** provides a comparison of the LOS at the two ramp intersections in each improvement scenario.

Full reports of the future conditions capacity analysis are provided in **Appendix H**.

Table 6: Future No Build Alternative Intersection LOS (2043)

Intersection	Approach	Level of Service	
		AM Peak	PM Peak
Kelly Creek Road @ I-20 EB Ramps	EB	B	E

Kelly Creek Road Interchange APPLE Study
Moody, St. Clair County, Alabama

According to the future conditions capacity analysis for the Future "No Build" scenario, many of the study intersection approaches are projected to operate with LOS E or F during each peak hour. The only approaches that are projected to experience LOS A are the uncontrolled northbound and southbound approaches of Kelly Creek Road at the various two-way stop-controlled intersections.

Table 7: Improvement Alternatives Intersection LOS (2043)

Scenario	Intersection	Approach		Level of Service	
		AM Peak	PM Peak	AM Peak	PM Peak
Alternative A - Improved Diamond Interchange	Kelly Creek Road @ I-20 EB Ramps	EB	EB Exit Ramp	D	D
		NB	Kelly Creek Rd	B	C
		SB	Kelly Creek Rd	A	C
		Total Intersection LOS		B	C
	Kelly Creek Road @ I-20 WB Ramps	WB	WB Exit Ramp	D	D
		NB	Kelly Creek Rd	B	B
		SB	Kelly Creek Rd	C	B
		Total Intersection LOS		C	C
Alternative B - Diverging Diamond Interchange	Kelly Creek Road @ I-20 EB Ramps	EB	EB Exit Ramp	A	A
		NB	Kelly Creek Rd	C	B
		SB	Kelly Creek Rd	B	B
		Total Intersection LOS		B	A
	Kelly Creek Road @ I-20 WB Ramps	WB	WB Exit Ramp	A	A
		NB	Kelly Creek Rd	A	C
		SB	Kelly Creek Rd	C	D
		Total Intersection LOS		B	C

According to the future conditions capacity analysis for the improvement alternatives, each study intersection approach is projected to operate with LOS D or better under both improvement alternatives during each peak hour.

2.6 Planning-Level Opinions of Probable Cost

Planning-level opinions of probable cost were prepared for each alternative. The estimates are based on the engineer's experiences and qualifications and represent the engineer's best judgment within the industry. The engineer does not guarantee that proposals, bids, or actual costs will not vary from the engineer's opinions of probable cost. The opinions of probable cost were estimated in 2023 dollars. For budgeting future year projects, these costs will need to be escalated to future year dollars.

The totals include opinions of probable cost of construction, preliminary engineering (15%), utility relocation, right-of-way, construction engineering and inspection (15%), ALDOT indirect costs (10%), and a 20% contingency. **Table 8** shows the opinions of probable cost, estimated in 2023 dollars, for the recommended improvements at each of the priority intersections. Detailed breakdowns of each alternative's opinion of probable cost can be found in **Appendix I**.

Opinions of probable cost for bridge structures were estimated at a conservative \$275 per square foot of bridge surface area.

Table 8: Opinions of Probable Cost for Improvement Alternatives

Category	Alternative A Improved Diamond	Alternative B Diverging Diamond
Construction, Contingency, and CE&I	\$14.8 million	\$10.4 million
Preliminary Engineering (15%)	\$1.9 million	\$1.3 million
Utility Relocation	\$150,000	\$300,000
Right-of-Way Acquisition	\$50,000	\$100,000
ALDOT Indirect Costs (13.7%)	\$2.3 million	\$1.7 million
Project Total	\$19.2 million	\$13.8 million

2.7 Alternatives Evaluation Matrix

An evaluation matrix was compiled to compare the benefits and challenges of each improvement alternative. The matrix is summarized in **Table 9**.

Table 9: Interchange Improvement Alternatives Evaluation Matrix

Category	No Build Alternative	Alternative A - Improved Diamond	Alternative B - DDI
Addresses Existing Capacity Deficiencies of the Two-Lane Bridge	No	Yes – Adds exclusive left turn lanes at ramp terminals	Yes – Reduces delay by allowing turning movements to flow freely
Mitigates Queueing on the I-20 Exit Ramps	No	Yes – Signalized intersections able to process queues more efficiently	Yes – Signalized intersections able to process queues more efficiently
Expands Capacity of the Interchange	No	Yes – Increases from 2 lanes to 4 lanes	Yes – Increases from 2 lanes to 4 lanes
Future LOS at I-20 Eastbound Ramps Intersection	AM Peak: LOS F PM Peak: LOS F	AM Peak: LOS B PM Peak: LOS C	AM Peak: LOS B PM Peak: LOS A
Future LOS at I-20 Westbound Ramps Intersection	AM Peak: LOS F PM Peak: LOS F	AM Peak: LOS D PM Peak: LOS C	AM Peak: LOS B PM Peak: LOS D
Opinion of Probable Cost	Maintenance costs only	\$19.2 million	\$13.8 million
Right-of-Way Acquisition & Utility Relocation Required	No	Yes, both required	Yes, both required
Method of Addressing Bridge Structure	No change	Full replacement; construct new bridge in 2 phases	Construct additional structure to the west of existing bridge; retain existing bridge
Interchange Alignment Matches Local Driver Expectation	Yes	Yes	No

2.7 Funding Sources

Costs associated with the design and construction of alternatives are expected to exceed current available resources. Federal, state, and local funding sources are available to pursue. Federal programs are administered by ALDOT.

Table 10 details funding sources, the category of the source, and the cost sharing percentage between state, local, and federal levels. Funding sources are complex and constantly evolving. The Bipartisan Infrastructure Law (BIL) passed in 2022 authorized many new competitive grant programs and re-authorized many of the formula funding from the previous transportation bill, the Fixing America's Surface Transportation (FAST) Act, from FY 2016 – FY 2020 and further extended in FY 2021.

Table 10: Funding Source Options

Funding Source	Category	Match Type
Surface Transportation Block Grant (STBG)	Federal	80% Federal / 20% Local
Rebuilding American Infrastructure with Sustainability and Equity (RAISE)	Federal	80% Federal* / 20% Local
Infrastructure for Rebuilding America (INFRA)**	Federal	80% Federal* / 20% Local
Mega Grant Program (Mega)**	Federal	80% Federal* / 20% Local
Rural Surface Transportation Grant (Rural)**	Federal	80% Federal* / 20% Local
Alabama Transportation Infrastructure Bank (ATIB)	State	Loan
Alabama Transportation Rehabilitation and Improvement Program – II (ATRIP-II)	State	Up to 100% State

*Federal match can increase above 80% if a project is located in a Historically Disadvantaged Community or Area of Persistent Poverty, as defined by USDOT.

**Part of the three-program Multimodal Project Discretionary Grant Opportunity (MPDG) in FY 2022.

Federal Funding

Federal funding is ideal for large transportation projects which require more detailed engineering design, right-of-way acquisition, and utility relocation. To move forward with implementing a federally funded project, the next step is to request inclusion of a project in the Alabama Statewide Transportation Improvement Plan (STIP). Once funds are in place, an environmental document will need to be prepared. The environmental document must include technical studies and public involvement outreach necessary to

comply with procedures of NEPA. Once the environmental study has been completed, design will be finalized, followed by construction. If additional right-of-way is required, acquisition would be conducted prior to construction.

Federal funding programs have varying funding amounts, and each program has specific requirements and stipulations associated with project eligibility. Since the BIL was passed, the USDOT releases a Notice of Funding Opportunity (NOFO) whenever the application acceptance period begins for each program's fiscal year.

The **Surface Transportation Block Grant (STBG)** is a federal aid program included in BIL and administered by ALDOT. STBG provides "flexible funding that may be used by States and localities for projects to preserve and improve the conditions and performance on any Federal-aid highway." As a formula-based federal aid program, the STBG differs from the competitive grant programs such as RAISE, INFRA, Mega, and Rural. STBG funds may be used to match federal funds in certain competitive grant programs such as PROTECT, but this is not permitted in most competitive grant programs (RAISE, INFRA, Mega, Rural).

The **Rebuilding American Infrastructure with Sustainability and Equity (RAISE)** competitive grant program provides funding through the USDOT and replaced the BUILD and Transportation Investment Generating Economic Recovery (TIGER) Discretionary Grants. One benefit of RAISE grant funds is that they allow project sponsors to obtain funding for multi-modal and multi-jurisdictional projects that are typically difficult to fund using traditional programs. Construction and pre-construction activities are RAISE eligible. Applications for RAISE funding should include a benefit-cost analysis for the proposed project. \$1.5 billion was the total funding amount authorized by the BIL for FY2023, not including the additional \$800 million for the program from the FY 2023 Appropriations Act. The minimum award size in FY 2023 for rural areas was \$1 million, while the maximum award was \$25 million. Any FY 2023 funding is required to be expended by September 2032. The FY 2024 NOFO is expected to be released in early 2024. If the project is located in an area of persistent poverty (APP) or historically disadvantaged community (HDC), the cost share can be up to 100% federally funded.

The **Infrastructure for Rebuilding America (INFRA)** competitive grant program which "awards project of national or regional significance to improve the safety, efficiency, and reliability of the movement of freight and people in and across rural and urban areas." The primary focus of the program is to fund projects which eliminate freight bottlenecks and improve critical freight movements. INFRA is known statutorily as the Nationally Significant Multimodal Freight and Highway Projects program. \$8 billion is the total funding amount for FY 2022 – 2026 nationwide.

The **Mega Grant Program (Mega)** is a competitive grant program which funds "large, complex projects that are difficult to fund by other means and likely to generate national or regional economic, mobility, or safety benefits." Mega is known statutorily as the National Infrastructure Project Assistance program. Eligible projects must be located

along the National Multimodal Freight Network, the National Highway Freight Network, or the National Highway System. Applications should include a benefit-cost analysis for the proposed project. \$5 billion is the total funding amount for FY 2022 – 2026 nationwide.

The **Rural Surface Transportation Grant Program (Rural)** is a competitive grant program supporting “projects to improve and expand the surface transportation infrastructure in rural areas to increase connectivity, improve the safety and reliability of the movement of people and freight, and generate regional economic growth and improve quality of life.” Applications should include a benefit-cost analysis for the proposed project. The total funding amount for FY 2022 – FY 2026 is \$2 billion nationwide.

For FY 2022, the INFRA, Mega, and Rural grant programs were part of a three-program NOFO entitled **Multimodal Project Discretionary Grant Opportunity (MPDG)**. Provides Federal financial assistance to highway and bridge, intercity passenger rail, railway-highway grade and separation, wildlife crossing, public transportation, marine highway, and freight and multimodal projects, or groups of such projects, of national or regional significance, as well as to projects to improve and expand the surface transportation infrastructure in rural areas. Applications should include a benefit-cost analysis for the proposed project. For FY 2022, MPDG authorized up to \$1 billion in Mega funding, up to \$1.55 billion in INFRA funding, and up to \$300 million in Rural funding.

For additional details on all BIL competitive grant programs, the following USDOT link provides resources for applicants:

https://www.fhwa.dot.gov/bipartisan-infrastructure-law/grant_programs.cfm

State Funding

The **Alabama Transportation Infrastructure Bank (ATIB)** was created in 2021 by ALDOT with a primary focus on assisting in financing major qualified projects which improve transportation facilities for public purposes. The minimum loan amount is \$5,000,000, and the loan term is not to exceed the useful life of the project. Any government entity or joint group of government entities are eligible to apply. Applications are accepted throughout the year.

The **Alabama Transportation Rehabilitation and Improvement Program-II (ATRIP II)** was created in 2019 by the Rebuild Alabama Act and is administered by ALDOT. Eligible projects include transportation projects that improve any state-maintained highway system. Projects with a primary focus on local roads are not eligible. For ATRIP II projects, ALDOT will perform the preliminary engineering as an eligible cost to the project if it has the capacity to do so. A project sponsor can request to perform the preliminary engineering; however, preliminary engineering performed by any entity other than ALDOT is not eligible for ATRIP II funding. Right-of-way acquisition is an ATRIP II eligible activity, but utility relocation is not. For FY 2023, the maximum funding amount per project was set at \$2 Million.

2.8 Stakeholder Involvement

Prior to initiation of the APPLE study, several meetings were held to discuss a potential project at the Kelly Creek Road interchange. Attendees at meetings prior to the study included ALDOT, St. Clair County, City of Moody, and Sain Associates. The most recent meeting prior to the initiation of this study was held on December 5, 2022. ALDOT Director John Cooper was in attendance alongside ALDOT East Central Region staff. The consensus from ALDOT at this time was that further study of traffic operations at the interchange was needed to advance a project.

A project kickoff meeting was held on September 13, 2023, at Moody City Hall. The meeting was attended by representatives of the City of Moody, St. Clair County, RPCGB, and Sain Associates. Stakeholders discussed the project background, identified priorities, and outlined expectations for the scope of the study. Short-term strategies to mitigate queuing on the interstate ramps were discussed, as well as the long-term goal of progressing towards a potential IMR.

Due diligence for a potential IMR was coordinated with ALDOT East Central Region staff and ALDOT Traffic Design Bureau staff. Determination of whether or not an IMR is required would be determined by the Alabama Division of FHWA.

2.9 Next Steps

This report documents the study undertaken to further evaluate the traffic operations at the Kelly Creek Road interchange with I-20. In previous sections of this report, transportation analysis and improvement recommendations have been provided.

The immediate next step following the study is for ALDOT to seek the opinion of the Federal Highway Administration's (FHWA) Alabama Division regarding the proposed alternatives. FHWA will determine whether or not an IMR is required to implement either of the proposed alternatives. Once this is officially determined and any required IMR is complete, the next step would be to seek funding for an environmental document, design, and construction of the resulting improvements.

Several IIJA-initiated competitive grant programs could be pursued once an IMR is complete or determined not to be necessary. The next chance to apply for appropriate competitive grant programs is likely Spring 2024 when a Notice of Funding Opportunity (NOFO) is released for the Infra, Rural, and Mega competitive grant programs.

Both the City and County currently have ATRIP-II projects underway which have not been let for construction at the time of this report. Therefore, funding for the Fiscal Year 2024 would not be eligible if either project is not let for construction by the application deadline, and the next opportunity for that program would be in Fall 2024 for Fiscal Year 2025 ATRIP-II cycle.

It is possible that a combination of local and state funding (i.e., ATRIP-II) could be used to reach the 20% match for various federal funding sources. This, along with combining the project with another large project in the area, should be explored throughout the process of seeking funding for the project.

Appendix C – Field Review Observations & Photos

Field Review Observations & Photos

Wednesday, 8/16/2023 – PM Observations

- Kelly Creek Road @ I-20 Eastbound Ramps
 - From 3:00 – 4:00, the queue on the eastbound exit ramp did not exceed approximately 5 cars.
 - Southbound Kelly Creek Road queued beyond the I-20 westbound ramps to the North Valero Truck Access during the 3:00 hour.
 - Kelly Creek Road southbound queue rarely exceeded the length of the bridge throughout the PM peak hour (4:30 – 5:30).
 - Kelly Creek Road northbound queue fluctuated between 0 cars and 10 cars until approximately 5:15. From 5:25 to 6:00, the Kelly Creek Road northbound queue extended back to the area between Love's Truck Driveways and US-78. The queue began to dissipate around 6:00 to 6:05.
 - Kelly Creek Road northbound queueing from 5:25 to 6:00 resulted in multi-minute delays for vehicles (heavy and passenger) exiting from all three Love's driveways onto Kelly Creek Road northbound.
 - The I-20 eastbound exit ramp queue contained approximately 0 to 5 cars at a time until approximately 5:10. From 5:10 to 6:00, the queue contained 10-20 vehicles, which resulted in the queue reaching the gore area of the exit ramp. The queue briefly extended onto the interstate mainline on a few occasions during this period.
 - At times, the I-20 eastbound exit ramp queue was 10-20 vehicles in length while 0-2 vehicles queued on Kelly Creek Road, suggesting that the traffic control of AWSC is unable to process the vehicle arrivals at the ramp terminal, even when Kelly Creek Road volumes are lower from 5:10-5:20.
 - The right turning movement from I-20 eastbound exit ramp rarely queued while the left turning movement queue extended to approximately 20 vehicles. Drivers preparing to turn right from the I-20 eastbound exit ramp were observed passing the queue on the ramp shoulder prior to the right turn lane taper beginning.
 - Most truck traffic exiting I-20 eastbound was observed turning right onto Kelly Creek Road southbound, presumably to access Moody Commerce Park or Love's. When sites develop and tenants operate at Kelly Creek Commerce Park, there will be additional heavy vehicle traffic turning left onto Kelly Creek Road northbound from the ramp. This is likely to exacerbate PM peak hour queueing and result in queued vehicles further onto the interstate.
 - In summary, the AWSC at the intersection of Kelly Creek Road and I-20 eastbound ramps could not process westbound or northbound volume demands from approximately 5:15 to 6:00.

Photo 1: Queueing on I-20 eastbound exit ramp at Kelly Creek Road

Photo 2: I-20 eastbound exit ramp queueing to gore point of I-20

- Kelly Creek Road @ I-20 Westbound Ramps
 - Acceptable gaps in southbound Kelly Creek Road traffic occurred infrequently. This is problematic for northbound heavy truck traffic attempting to turn left onto I-20 westbound. Theoretically, the channelized section of left turn lane could help with this issue, but its storage capacity is insufficient for most heavy trucks.
 - From approximately 3:00 to 3:45, the queue along Kelly Creek Road southbound prevented vehicles entering Kelly Creek Road southbound from the I-20 westbound exit ramp. This results in multi-minute delays for motorists queued on the I-20 westbound exit ramp.
 - Several instances of failure to yield occurred at the conflict point between the northbound left and southbound right turning movements. Drivers completing the northbound left turn are instructed by signage to yield to drivers completing southbound right turns.
 - The queue on northbound Kelly Creek Road contained approximately 6-10 cars from 4:30 to 5:15; this was typically caused by vehicles having to wait for an appropriate gap to turn left onto I-20 westbound.
 - A maximum queue of 5-10 vehicles was observed on the I-20 westbound exit ramp; however, vehicles still experienced multi-minute delays waiting for a truck to make a left turn onto Kelly Creek Road southbound.

Photo 3: Southbound Kelly Creek Road at I-20 westbound ramps

Thursday, 8/17/2023 – AM Observations

- Kelly Creek Road @ I-20 Eastbound Ramps
 - Northbound Kelly Creek Road queued to Love's Truck Access 2 throughout the AM peak hour. At 7:30 the queue reached US-78.
 - At a minimum, the queue on southbound Kelly Creek Road extended the length of the bridge for the entire AM peak hour. At 7:45 the queue was observed extending all the way to the Park Avenue intersection.
 - The I-20 eastbound exit ramp queue consisted of 5 or fewer vehicles the entire AM peak hour.

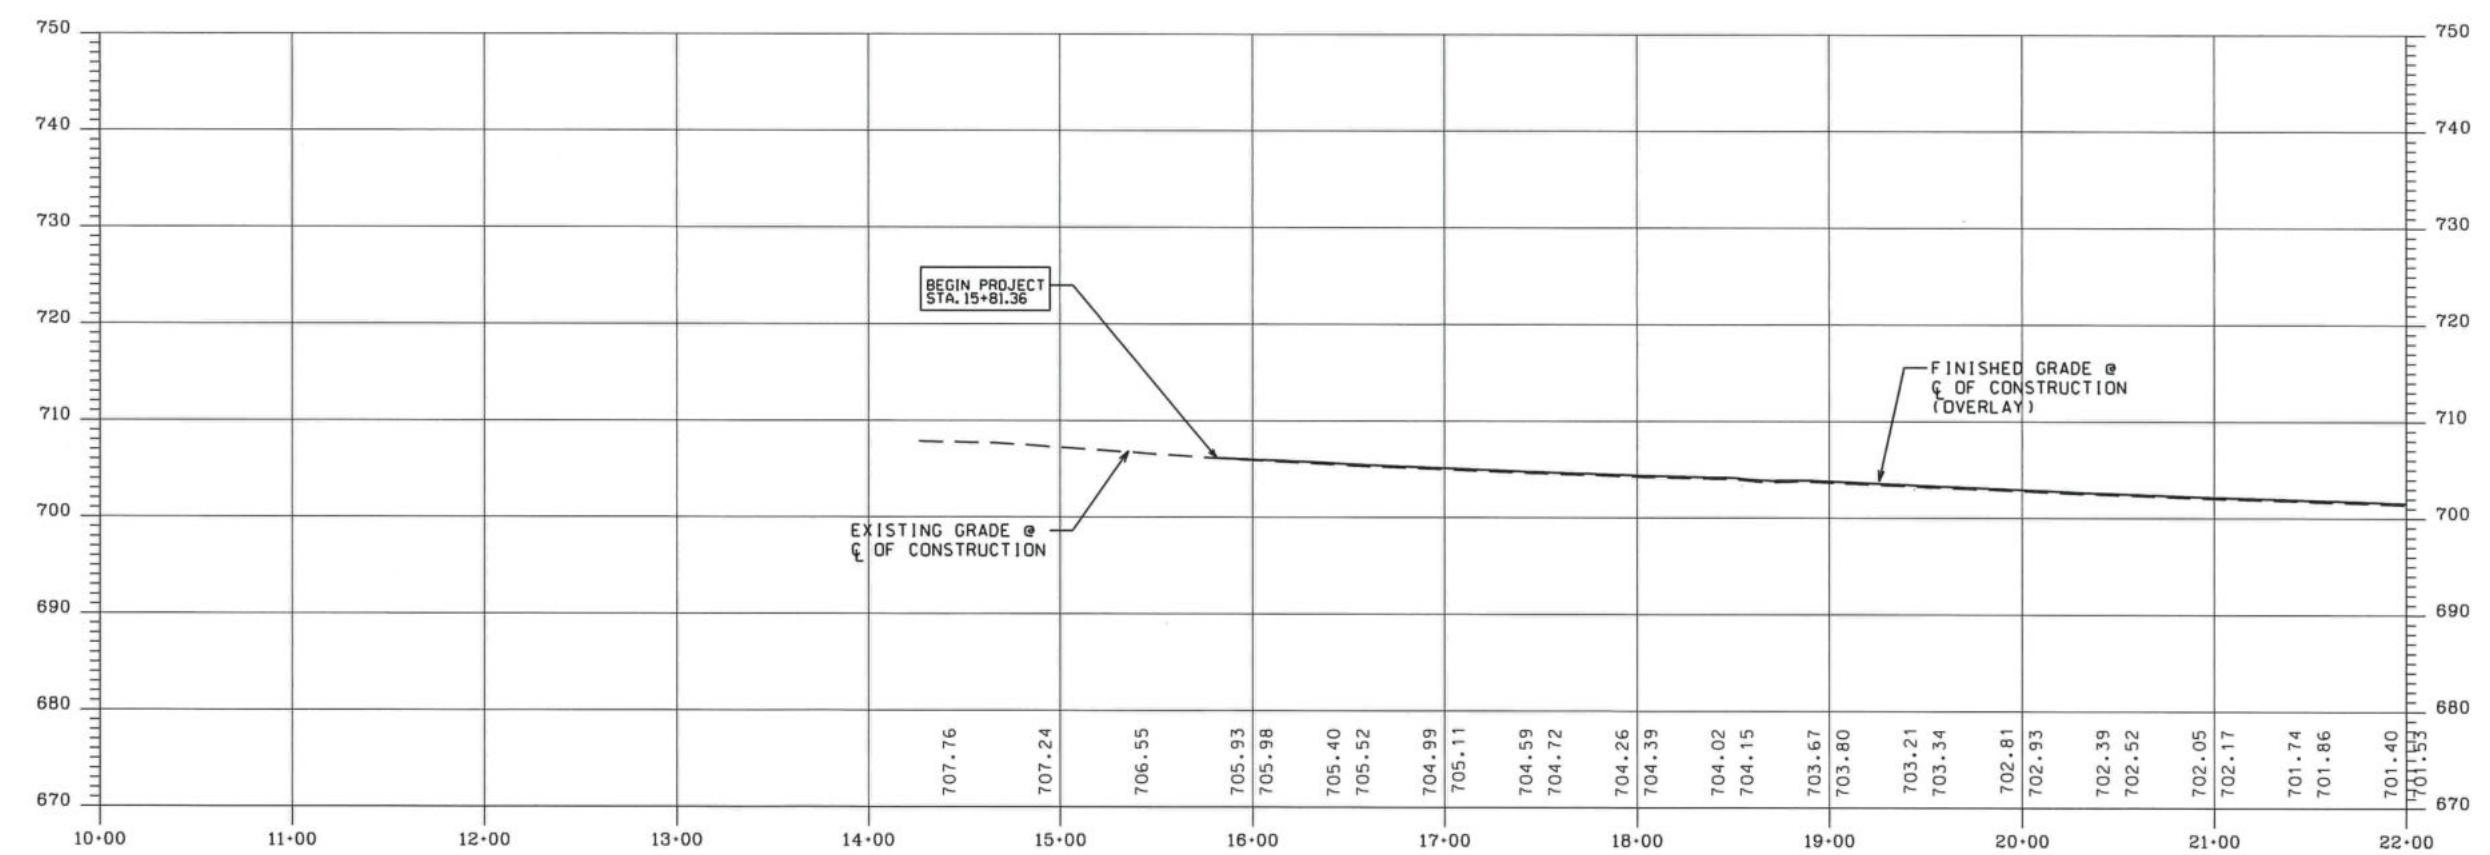

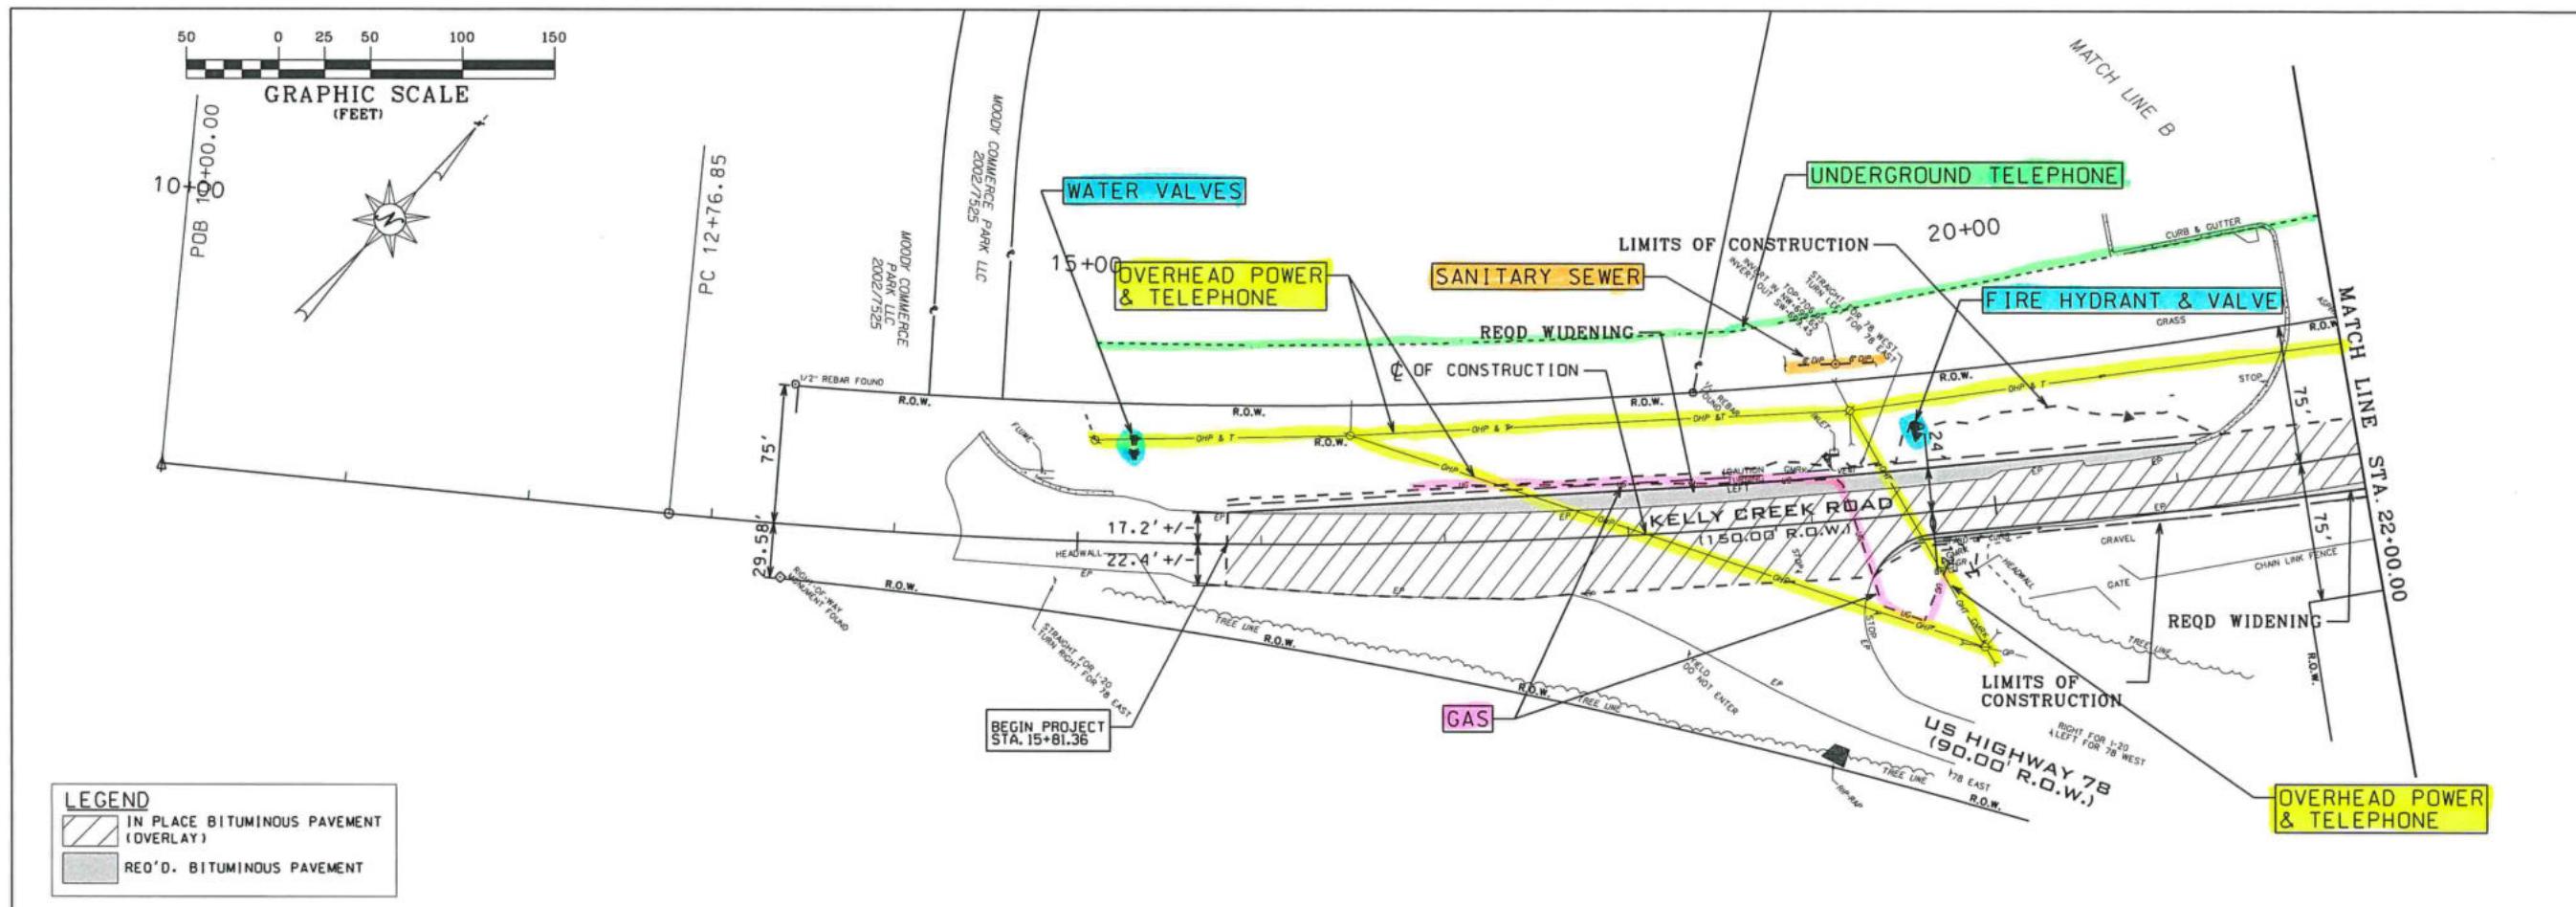

Photo 4: Queueing on northbound Kelly Creek Road south of I-20 eastbound ramps

Photo 5: Queueing on southbound Kelly Creek Road just south of Park Avenue

- Kelly Creek Road @ I-20 Westbound Ramps
 - At various points during the AM peak hour, the northbound left-turning vehicles from Kelly Creek Road onto I-20 westbound queued in the channelized left turn lane area because of high southbound right-turning volumes.
 - Vehicles exiting I-20 westbound were observed driving through the hatched area when turning right. This especially occurred when a heavy truck was turning left, creating a sight distance issue looking south along Kelly Creek Road.
 - During the AM peak hour, the queue on the I-20 westbound exit ramp did not exceed 5 vehicles.

Appendix E – Descriptions of Levels of Service

Signalized Intersections

Level of service criteria for signalized intersections is defined in terms of *delay*. Delay is a measure of driver discomfort, frustration, fuel consumption, and lost travel time. Specifically, level of service criteria are stated in terms of the average stopped delay per vehicle for a 15-minute analysis period.

Level of Service	Average Delay (seconds/vehicle)
A	0 - 10
B	> 10 - 20
C	> 20 - 35
D	> 35 - 55
E	> 55 - 80
F	> 80

Unsignalized Intersections

Level of service criteria for unsignalized intersections is stated in terms of average control delay. Control delay is defined as the total elapsed time from a vehicle joining the queue until its departure from the stopped position at the head of the queue. The criteria for each level of service are cited in the table below.

Level of Service	Average Control Delay (seconds/vehicle)
A	0 - 10
B	> 10 - 15
C	> 15 - 25
D	> 25 - 35
E	> 35 - 50
F	> 50

				CE&I (15%) \$ 1,931,400.00
				Construction Total \$ 14,808,000.00
				Preliminary Engineering (15%) \$ 1,931,400.00
				Utility Relocation Allowance: \$ 150,000.00
				Right-of-Way Cost: \$ 50,000.00
				ALDOT Indirect Costs (13.7%) \$ 2,320,697.80
				Total Estimated Project Cost \$ 19,261,000.00

NOTES:

ENGINEER'S OPINION OF PROBABLE CONSTRUCTION COST PROVIDED IS MADE ON THE BASIS OF ENGINEER'S EXPERIENCES AND QUALIFICATION AND REPRESENTS ENGINEER'S BEST JUDGMENT WITH THE INDUSTRY. ENGINEER DOES NOT GUARANTEE THAT PROPOSALS, BIDS, OR ACTUAL COST WILL NOT VARY FROM ENGINEER'S OPINION OF PROBABLE COST.

THE TOTAL ESTIMATED PROJECT COST WAS PREPARED FOR THE 2023 PLANNING YEAR. THIS NUMBER SHOULD BE INCREASED TO ACCOUNT FOR RISING COSTS DUE TO INFLATION SHOULD THE IMPROVEMENTS NOT BE IMPLEMENTED IN 2023.

UTILITY RELOCATION AND RIGHT-OF-WAY COSTS ARE INCLUDED IN THIS ESTIMATE. HOWEVER, THESE COSTS ARE HIGHLY VARIABLE AND DEPENDENT ON SEVERAL FACTORS. DUE TO LIMITED INFORMATION AT THE TIME OF THIS ESTIMATE, THE COST PROVIDED SHOULD BE CONSIDERED AS BUDGETARY ONLY.

CONTINGENCY INCLUDES MISCELLANEOUS AND/OR UNKNOWN ITEMS THAT CANNOT BE QUANTIFIED AT THE TIME THIS STUDY WAS CONDUCTED.

Erosion Control	LS	1	\$ 110,000.00	\$ 110,000.00
Traffic Control	LS	1	\$ 230,000.00	\$ 230,000.00
Traffic Signal	EA	2	\$ 300,000.00	\$ 600,000.00
Proposed Bridge	SF	13410	\$ 225.00	\$ 3,017,250.00
Lighting	LS	1	\$ 500,000.00	\$ 500,000.00
Mobilization (9.7% of Overall Cost)	LS	1	\$ 612,740.27	\$ 612,740.27
Engineering Controls (1.3% of Overall Cost)	LS	1	\$ 96,585.45	\$ 96,585.45
				Construction Subtotal \$ 7,527,000.00
				Contingency (20%) \$ 1,505,400.00
				CE&I (15%) \$ 1,354,860.00
				Construction Total \$ 10,388,000.00
				Preliminary Engineering (15%) \$ 1,354,860.00
				Utility Relocation Allowance: \$ 300,000.00
				Right-of-Way Cost: \$ 100,000.00
				ALDOT Indirect Costs (13.7%) \$ 1,663,571.82
				Total Estimated Project Cost \$ 13,807,000.00

NOTES:

ENGINEER'S OPINION OF PROBABLE CONSTRUCTION COST PROVIDED IS MADE ON THE BASIS OF ENGINEER'S EXPERIENCES AND QUALIFICATION AND REPRESENTS ENGINEER'S BEST JUDGMENT WITH THE INDUSTRY. ENGINEER DOES NOT GUARANTEE THAT PROPOSALS, BIDS, OR ACTUAL COST WILL NOT VARY FROM ENGINEER'S OPINION OF PROBABLE COST.

THE TOTAL ESTIMATED PROJECT COST WAS PREPARED FOR THE 2023 PLANNING YEAR. THIS NUMBER SHOULD BE INCREASED TO ACCOUNT FOR RISING COSTS DUE TO INFLATION SHOULD THE IMPROVEMENTS NOT BE IMPLEMENTED IN 2023.

UTILITY RELOCATION AND RIGHT-OF-WAY COSTS ARE INCLUDED IN THIS ESTIMATE. HOWEVER, THESE COSTS ARE HIGHLY VARIABLE AND DEPENDENT ON SEVERAL FACTORS. DUE TO LIMITED INFORMATION AT THE TIME OF THIS ESTIMATE, THE COST PROVIDED SHOULD BE CONSIDERED AS BUDGETARY ONLY.

CONTINGENCY INCLUDES MISCELLANEOUS AND/OR UNKNOWN ITEMS THAT CANNOT BE QUANTIFIED AT THE TIME THIS STUDY WAS CONDUCTED.
